Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The AC1 gene must be expressed for efficient replication of the two genomic components, DNA-A and DNA-B. It encodes a protein (see AAW34336) having a DNA binding site specific to the DNA-A common region, a DNA nicking activity, and an NTP binding activity. The invention involves production of transgenic plants containing DNA comprising AC1 or C1 wild-type or mutant sequences that negatively interfere in trans with geminiviral replication during infection. Such transgenic plants are resistant to viral infection. The AC1/C1 genes are especially from ToMoV, tomato yellow leaf curl virus or bean golden mosaic geminivirus (see AAT93282-93) and encode polypeptides (see AAW34324-35) that have mutations in the highly conserved DNA-nicking domain and/or the NTP-binding domain. This DNA sequence comprises a transdominant lethal mutant, designated TOMOV-ACIdImi, of the ACI gene of tomato mottle virus virus (TOMOV). It encodes an ACI protein (see AAW34325) that carries a mutation in its NTP-binding domains. The ACI gene (see also AAT93294) must be expressed for efficient replication of the two genomic components, DNA-A and DNA-B, of

genes - have increase mottle virus, tomato

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the bipartite TOMOV genome. The invention involves production of transgenic plants containing DNA comprising geminivirus ACI or CI wild-type or mutant sequences that negatively interfere in trans with geminiviral replication during infection. Such transgenic plants are resistant to viral infection. The ACI/CI genes are especially from TOMOV, tomato yellow leaf curl virus or bean golden mossaic geminivirus (see ANT93282-93) and encode polypeptides (see ANM94324-35) that have mutations in the highly conserved DNA-nicking and/or the NTP-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1169
                                                                                                                                                                                                                                                                                                                                                                                              524

This DNA sequence comprises a transdominant lethal mutant, designated TOMOV-ACIAlm23, of the ACI gene of tomato mottle virus virus (TOMOV). I encodes an ACI protein (see AAW34326) that carries 2 mutations in an NT binding domain. The ACI gene (see also AAT93294) must be expressed for efficient replication of the two genomic components, DNA-A and DNA-B, o the bipartite TOMOV genome. The invention involves production of transgenic plants containing DNA comprising geminivirus ACI or CI wild-type or mutant sequences that negatively interfere in trans with geminiviral replication during infection. Such transgenic plants are resistant to viral infection. The ACI/CI genes are especially from TOMO'

an NTP-

of.

TOMOV,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  문
                                                    This genomic DNA sequence comprises a full-length A-component clone of tomato mottle virus (TOMOV), a geminivirus that has a bipartite genome comprising DNA-A and DNA-B. It was isolated from TOMOV infected Nicotiana benthamiana and tomato plant DNA by restriction digestion. The DNA-B component (see AAT93310) was also isolated. TOMOV DNA-A contains the ACI gene (see AAT9339) that must be expressed for efficient replication of DNA-A and DNA-B. The invention involves production of transgenic plants containing DNA comprising ACI or CI wild-type or mutant sequences that negatively interfere in trans with geminiviral replication during infection. Such transgenic plants are resistant to viral infection. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Transgenic plants expressing geminivirus AC1 and C1 wild-type and mutant genes - have increased resistance to geminivirus infection e.g. tomato mottle virus, tomato yellow leaf curl virus or bean golden mosaic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Geminivirus; ToMoV; AC1 gene; transdominant disease resistance; ss; cyclic; circular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Stout JT,
